# OPENMRS @GCI'18

Google Code-in (GCI) is an annual programming competition hosted by Google Inc. that allows pre-university students to complete tasks specified by various, partnering open source organizations.

OpenMRS is a collaborative open source project to develop software to support the delivery of health care in developing countries. We are a worldwide network of volunteers from many different backgrounds including technology, health care, and international development. Our mission is to improve health care delivery in resource-constrained environments by coordinating a global community to create and support this software.

TOGETHER, WE ARE CHANGING GLOBAL HEALTH. YOU DON'T NEED TO BE A PROGRAMMER OR A PHYSICIAN TO HELP SAVE LIVES.
